

Development of Digital Subsidy & Grant Administration Platform

Module-Wise Project Requirements

This document summarizes the module-wise baseline requirements for the Development of Digital Subsidy & Grant Administration Platform. The project covers the lifecycle from beneficiary application and eligibility verification through staged fund disbursement, compliance tracking, analytics, security, integration and auditability.

Module 1: Beneficiary & Scheme Master Data Management

- Develop centralized management for beneficiary profiles and scheme configuration information.
- Implement beneficiary registration, document upload, and identity validation.
- Maintain scheme master data including eligibility criteria, grant amount slabs, and regional allocation budgets.
- Support beneficiary category classification and historical application tracking.

Module 2: Eligibility Scoring & Multi-Level Verification Workflow Engine

- Implement application submission with automated eligibility scoring based on scheme-specific criteria.
- Develop configurable multi-level verification workflows: field officer ground verification, district officer review, and finance approval for fund release.
- Automate application routing logic: straightforward cases can be fast-tracked, while flagged or high-value cases are escalated for additional scrutiny.
- Enable workflow monitoring, rejection handling, and re-verification request processing.

Module 3: Staged Disbursement & Compliance Milestone Tracking System

- Develop disbursement plan configuration supporting staged fund release tied to compliance milestones such as documentation, ground verification, and utilization proof.
- Implement milestone tracking with due-date calculation, compliance reminder automation, and non-compliance flagging.
- Generate complete disbursement schedules with milestone-wise amount breakdown per beneficiary.
- Track actual fund release against scheduled milestones and update application disbursement status.

Module 4: Fund Utilization & Regional Analytics

- Develop scheme-wise and region-wise fund utilization dashboards.
- Generate disbursement reports, pending milestone summaries, and non-compliance analysis.
- Provide beneficiary category-wise distribution, approval turnaround time, and budget exhaustion insights.
- Support downloadable PDF and Excel reports for scheme and regional summaries.

Module 5: Security, Integration & Deployment

- Implement role-based access control across field officers, district officers, finance approvers, and administrators.
- Develop REST APIs for integration with treasury and beneficiary database-style systems.
- Enable audit logging for every verification decision, approval action, and disbursement update.

Expected Overall Outcomes

- Centralized disbursement tracking supporting multiple schemes and regions.
- Automated beneficiary eligibility scoring with configurable scheme criteria.

- Multi-level verification involving field, district, and finance approval stages.
- Staged disbursement tracking linked to compliance milestone completion.
- Scheme-wise and region-wise fund utilization and disbursement analytics.
- Secure role-based access and a complete verification audit trail.
- REST API integration support for treasury and beneficiary database systems.

Project Presentation Expectations

Each intern should be able to explain the module they implement, the screens/APIs involved, the database entities and relationships used, the end-to-end flow, and any additional feature they add. Students may take help from AI tools of their choice, but they must understand and be able to explain the final code and implementation.
